

CORE COMPETENCIES

WorldVision Technologies, Inc. (WTECH), with over 15 years of experience in implementing data management and processing solutions, delivers high quality, customized data solutions to our clients.

Our development cycle begins with the most important piece of robust data management: building internal business processes, data analytics, and reporting models to support a client's smart business decisions. We then implement data management and processing tools, with experience across a diverse range of data solutions, to power the processes we design with clients. WTECH maintains its competitive edge and delivery of high quality data products by investing in company-wide quality programs. We believe in the power of data to positively improve business operations and revenue.

CAPABILITIES

Business Intelligence (BI) Cloud Computing:

Clients can seamlessly analyze their business remotely with WTECH cloud based BI solutions saving valuable time in the process.

BI Advisory and Consulting: Clients will have a BI analysis and reporting model which makes the most sense for the metrics they care about with a WTECH designed BI process.

Data Warehouse Architecture & Design:

Clients receive robust, customized, scalable, and economical data architecture to manage any volume of data through a WTECH designed warehouse.

Data Integration: Data can be retrieved and integrated from any source to power business decisions. WTECH has experience implementing the best tools in the industry today.

Integration Tools: ODI, SSIS, Informatica, and Talend. **Data Visualization and Reporting:** Clients looking to support business decisions with data will appreciate WTECH's laser focus on turning data into pictures and reports which make sense for client needs and metrics.

Visualization and Reporting Tools: OBIEE, Power BI, SSRS, SAP, Objects, and Tableau.

Big Data Implementation: Clients will have both a process and the tools to take complex data from disparate sources and consumer it in a manner that is useful to their business with WorldVision's analytic capabilities.

DIFFERENTIATORS

- Clients looking for improved data management and analytics will benefit immediately from WTECH's laser focus and 15 years of industry experience in building industry leading business intelligence capabilities.
- Government will find business intelligence process design and expertise in addition to application, hardware, and reporting tools under one roof with the WorldVision team as their BI partner.
- Government client problems with managing and reporting data to service the public can be proactively solved with WTECH's long-term subject matter expertise in data management, analytics, and reporting across diverse industry sectors.

PAST PERFORMANCE

Federal Housing Agency (FHA) BI System Integration

The FHA received a modernized, Enterprise Architecture (EA) compliant system to manage FHA business processes, including a transformation to an Oracle environment well-suited to the agency's analytics and reporting needs.

WTECH performed as a subcontractor to KPMG on development and support services related to this contract.

Department of Energy (DOE) iManage Custom Programming

The DOE now has consolidated and streamlined Department-wide efforts to integrate financial, budgetary, procurement, personnel, program, and performance information.

This unified system is supported by a central data warehouse and portal that links common data elements from each of the Department's business systems supporting both external and internal reporting. As a subcontractor to Appsential, WTECH tasks included architecting, designing, and developing business intelligence application software programming.
